                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        JOURNAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               source
Clone distribution: MGC clone distribution information can be for through the I.M.A.G.E. Consortium/LIMI at: http://image.llnl.gov Series: IRAK Plate: 182 Row: f Column: 6
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection, from a library constructed by Blizabeth Bosch. cDNA was prepared from RNA extracted from muscle, normalised, and poly A-trimmed. EcoRI-NotI cut cDNA was then ligated into the vector. Vector: political intervals in the vector of the vector of the vector of the vector of the vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Boardman, P.E., Bonfield, J.K., Brown, W.R.A., Carder, C., Chalk, S.E., Croning, M.D.R., Davies, R.M., Francis, M.D., Grafham, D.V., Hubbard, S.J., Humphray, S.J., Hunt, P.J., Maddison, M., McLaren, S.R., Niblett, D., Overton, I.M., Rogers, J., Scott, C.E., Taylor, R.G., Tickle, C. and Wilson, S.A.

Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC Alzheimer's disease); autolimnume disease (e.g. systemic lugus (erythematosus, rheumatoid arthritis, insulin-dependent diabetes mellitus); myeloid or lymphoid cell disorders (e.g. anaemia and thrombocytopaemia) (c); wounds, ulcers, burns; bone disorders (e.g. osteoporosis, osteoarthritis); mechanical and traumatic disorders (e.g. stroke, head (trauma); lung or liver fibrosis; reperfusion injury in various tissues; bacterial, viral or fungal infections; allergic conditions such as coagulation disorders (e.g. haemophilia); (c) cancer and tumours; and inflammatory diseases (e.g. haemophilia); (c) disease, anaphylaxis). The protein may be used to inhibit the growth, (c) infection or function of infectious agents such as bacteria, fungi, (c) viruses, or to effect bodily characteristics, biorhythms or circadian (c) cycles of rhythms. The protein may also have (c) proliferation/differentiation, stem cell growth factor, haematopoiesis (e) cregulation, immune stimulating or suppressing, chemotactic/chemokinetic, haemostatic and thrombolytic, receptor/ligand, and antiinflammatory cactivities. The cDNA sequences of the invention are useful for expressing recombinant protein for analysis. The present sequence represents a novel human cDNA sequence of the invention, this sequence is an expressed sequence tag (EST) and was identified using subtractive hybridisation

(I) is useful for preventing, treating, or can ameliorating a medical condition, particularly an immune disorder, an cc aberrant glutamate transport or motor neuron disorder, such as cc amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like condition. The compositions and methods are also useful for diagnosing, c prognosticating, treating, ameliorating and/or treating disorders (associated with MP-1 activity, e.g. diabetes, cancer, reproductive cd disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell aplasia), metabolic disorders (e.g. premature puberty, Kallman syndrome, cor Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Huntington's disease or Tourette syndrome), liver cand renal diseases and immune disorders (e.g. AIDS, rheumatoid arthritis cor sepsis), pulmonary diseases (e.g. pneumonia, emphysema or cystic cor sepsis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease or Parkinson's disease). This sequence represents a metalloprotease MP1 polynucleotide

```

The present sequence encodes human O-sialoglycoproteinase-like protein (OSGPLP). The present invention also describes: (1) the preparation of the OSGPLP protein; (2) applying the OSGPLP protein in diagnosis; (3) the prevention and/or treatment of related diseases; (4) utilising the OSGPLP protein in screening its agonist, excitomotor and inhibitor and preparing an antibody against the CSCPLP protein, aid (3) the use of the USGPLP polynucleotide sequences, proteins, agonists, excitomotors, inhibitors and antibodies in treating diseases related to the abnormal OSGPLP gene and in preparing the medicine composite for the treatment

New isolated nucleic acid encoding MP-1 protein, useful for preventing, treating, or ameliorating diseases associated with aberrant metalloproteinase activity, e.g. immune, metabolic, inflammatory and neurological disorders.

Claim 1; Fig 1A-C; 473pp; English.

cc metalloprotease (MP-1). (I) is useful for preventing, treating, or cc ameliorating a medical condition, particularly an immune disorder, an cc aberrant glutamate transport or motor neuron disorder; such as cc amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like condition. The compositions and methods are also useful for diagnosing, croated with MP-1 activity, e.g. diabetes, cancer, reproductive cc disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell caplasia), metabolic disorders (e.g. premature puberty, Kallman syndrome, cc or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Huntington's disease or Tourette syndrome), liver cand renal disease and immune disorders (e.g. AIDS, rheumatoid arthritis cor sepsis), pulmonary diseases (e.g. moumonia, emphysema or cystic cfibrosis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease or Parkinson's disease). This sequence represents a cc metalloprotease MP1 polynucleotide The invention describes an isolated nucleic acid molecule (I) encoding metalloprotease (MP-1). (I) is useful for preventing, treating, or

```
The invention relates to an isolated polypeptide comprising: any of 28 cc sequences of 48-1256 amino acids; a natural amino acid sequence at least CO 90% identical to the 28 amino acids sequences, 94% identical to a sequence co of 703 or 267 amino acids, 96% identical to a sequence of 414 amino concept of 703 or 267 amino acids, 96% identical to a sequence of 414 amino concept of 703 or 267 amino acids, 96% identical to a sequence of 414 amino concept of 703 or 267 amino acids, 96% identical to a sequence of 414 amino concept of 703 or 267 amino acids, 91% identical to a sequence of 414 amino concept of 705 or 70% identical to a sequence of 414 amino concept of 705 or 70% identical to a sequence of 422 amino acids, all given in concept of 705 or 70% identical polypeptides. The polypeptides and polymuclectides are useful concept of 705 or 70% identical polypeptides and polymuclectides are useful concept of 705 or 70% identical polypeptides, or 70% identical proliferative diseases (e.g. cancer, concept of 70% identical polypeptides, or 70% identical polypeptides, or 70% identical polypeptides, or 70% identically bind to 70% identically potein-protein for 70% identically bind to 70% identically potein-protein for 70% identically bind to 70% identically potein-protein for 70% identically bind to 70% identically potein-protein interactions, drug-target interactions, and 70% or 70% identically potein-protein interactions drug-target interactions, and 70% or 70% identically potein-protein for 70% identically bind to 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically 70% identically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          22-JUN-2001; 2001US-0300508P.

```
CC protease or seven transmembrane domain (7TM) receptor family members. Sequences of the invention are useful in diagnosing and treating cancer (CC sequences of the invention are useful in diagnosing and treating cancer (CC lung cancer), immune disorders (e.g. selective IgA deficiency, rheumatoid (CC archritis, diabetes, allery), heart or cardiovascular disorders (e.g., colon or (CC reptorial), atherosclerosis, arrhythmias, ischaemic heart disease, (CC myocardial infarction, thrombus) including endothelial cell disorders (e.g., seoriasis, Grave's disease), haematopoietic disorders disease), (CC disorders (e.g. cerebral oedema, Parkinson's or Alzheimer's disease), (CC pain and metabolic disorders (e.g. obseity), liver disorders or platelet (e.g. diagnostic assays, prognostic assays, monitoring clinical trials (c.g., diagnostic assays, prognostic assays, monitoring clinical trials and prophylactic and therapeutic methods. The (c.g., diagnostic asiay) and prophylactic and therapeutic methods. The (c.g., diagnostic asiay) and prophylactic and therapeutic methods. The (c.g., diagnostic asiay) and prophylactic and therapeutic methods. The (c.g., diagnostic asiay) and prophylactic and therapeutic methods. The (c.g., diagnostic asiay) and prophylactic and therapeutic methods. The (c.g., diagnostic asiay) and as surrogate markers. Sequences of the invention are (c.g., 28472 cDNA)
New 38650, 28472, 5495, 65507, 81588 or 14354 nucleic acid molecules, useful for diagnosing and treating cancer, immune, cardiovascular, hematopoietic, brain, pain, metabolic, liver or platelet disorders, a

                                                                                                                                                                                                                                                                                                        Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated 38650 (encoding adenosine CC deaminase), 28472 (encoding a glycoprotease), 5495 (encoding a 7 CC transmembrane receptor), 65507, 81588 or 14354 nucleic acid molecule (or CC a sequence which is at least 60% identical to the six nucleic acids or their open reading frames, fragments of at least 15 nucleotides, CC naturally occurring variants, or a DNA insert of the plasmid deposited CC with the American Type Culture Collection as Accession No. not defined in CC the specification, which encodes the amino acid sequence). Also included CC are a host cell containing the nucleic acids (used to produce the protection), the encoded proteins, an antibody that selectively binds to the polypeptide, and identifying a compound that binds to/modulates the CC methods are useful for diagnosing, treating cancer, aberrant cellular CC methods are useful for diagnosing, treating cancer, aberrant cellular CC cardiovascular disorders including endothelial cell disorders, pain CC cand metabolic disorders, blood vessel disorders, brain disorders, pain CC cambridge disorders, blood vessel disorders, brain disorders, many CC examples of these disorders are given in the specification). The present CC sequence is the Human CDNA 28472 encoding a glycoprotease

                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes isolated 38650, 28472, 5495, 65507, 81588 and CC 14354 nucleic acid molecules (I) and their encoded polypeptides (II). The C38650 nucleic acid molecule comprises a sequence encoding adenosine CC deaminase. The 28472 nucleic acid molecule comprises a sequence encoding CC a human glycoprotease. The 5495, 65507, 81588 and 14354 comprise CC 38650, 28472, 5495, 65507, 81588 or 14354 nucleic acid and polypeptide CC sequences that encode a human seven transmembrane domain (77M). The CC sequences are useful for diagnosing, preventing or treating a subject CC with or at risk of developing a disorder, e.g. cancer or aberrant CC cellular proliferation and/or differentiation (e.g. breast, ovarian, CC prostate, colon or lung cancer), immune disorders, heart disorders, CC cardiovascular disorders, endothelial disorders, heart disorders, CC liver disorders or platelet disorders, pain and metabolic disorders, CC liver disorders or platelet disorders. These disorders include carcinoma, Sarcoma, leukaemia, Hodgkin's disease, autoimune disorders, CC ischaemia, heart disease, Crohn's disease, autoimune disorders, CC ischaemia, parand's disease, aneurysm, cerebral ischaemia, peripheral CC cachexia or diabetes. This sequence encodes the novel human glycoprotease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New adenosine deaminase, glycoprotease and seven transmembrane domain nucleic acids and polypeptides, designated 38650, 28472, 5495, 65507, 81588 and 14354, useful for treating e.g. leukemias, Hodgkin's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     08-NOV-2000; 2000US-0246768P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        451 G; 643
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ADA52832
```

New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases in which the gene is involved, or as target molecules for gene therapy.

The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

                                                                                                                   Percent Similarity:
                                                                                                                                                                                                                     The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                Local Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2004-441208/41

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel isolated human diagnostic and therapeutic polynucleotide (designated dithp). The novel dithp polynucleotide comprises: any of 188 DNA sequences consisting obase pairs fully defined in the specification; a polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       or Alzheimer's.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        13-JAN-2003; 2003WO-US001096

Novel transgenic animal, comprising a disruption in protease target gene, is useful for identifying agents that ameliorates a phenotype associated with a disruption in a protease target gene.
                                                                                                                                                          Example 3; Fig 7; 62pp; English.
                                                                                                                                                                                                                                            13-DEC-2000; 2000US-0255971P.
                                                                                                                                                                                                                              (DELT-) DELTAGEN INC.
                                                                                                                                                                                                   2002-657389/70
```

The present invention describes a non-human transgenic animal (I) C comprising a disruption in a protease target gene (PG) selected from CC calcium activated neutral protease type 5 (CAPN5) gene, tryptase 4 gene CC and sialoglycoprotease-like gene. Also described is a targeting construct (II), comprising a first polynucleotide sequence homologous to at least a CC first portion of PG, a second polynucleotide sequence homologous to at CC least a second portion of PG and a selectable marker. (II) is useful for CC producing a transgenic mouse comprising a disruption in a protease target gene, by introducing (II) into a cell, introducing the cell into a CC blastocyst, implanting the resulting blastocyst into a pseudopregnant CC gene, where the pseudopregnant mouse gives birth to a chimeric mouse, CC and breeding the chimeric mouse to produce the transgenic mouse. (I) is constituted for identifying an agent that modulates the expression or function of a protease target gene, by administering an agent to (I) and CC determining whether the expression or function of the disrupted protease target gene by administering an agent to (I) and CC consected gene in (I) is modulated. (I) is also useful for testing the efficacy of proposed genetic and pharmacological therapies for human CC genetic diseases, such as neurological, neuropsychological or psychotic illness. The present sequence represents murine sialoglycoprotease-like gene sequence, which is used in an example from the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as mybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed
                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful diagnostics, forensics, gene mapping, identification of mutat responsible for genetic disorders or other traits and to asse

(I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is cuseful for generating antibodies against it, detecting or quantitating a cc useful for generating antibodies against it, detecting or quantitating a cc polypeptide in tissue, as molecular weight markers and as a food cc supplement. (II) and its binding partners are useful in medical imaging co f sites expressing (II). (I) and (II) are useful for treating disorders involving abservant protein expression or biological activity. The cc quantity and polynucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cc responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and camino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this cateful did not appear in the printed specification, but was obtained in celectronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel method for predicting gene potential by associating nucleic acid sequences of unknown function with particular sub-population profiles specifically, it refers to classifying an unknown multi-lineage affiliated gene by collecting hybridisation data to develop a gene expression map, in order to determine the discrete sub-population where it is expressed. The present invention describes methods for predicting the lineage commitment of genes associated with the self-renewing haematopoietic (blood) stem cells (MSCs), as well as the non-
                                                                                                                                                                                                                                                                                                                                                                                                                        self renewing multipotent progenitors (MPPs), common lymphoid progenitors (CLPs) and common myeloid progenitors (CMPs), which are collectively referred to as bone marrow stem cells populations. As such, these methods can be used to identify associated multi-lineage affiliated genes and hence the underlying molecular mechanisms in physiological haematopoietic development. This polynucleotide sequence is DNA associated with a murine MPP sub population of cells of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Classifying an unknown multi-lineage affiliated gene comprises isolating expressed nucleic acid sequences from the discrete cell sub-populations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              BUM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gene potential; multi-lineage; cell commitment; haematopoietic stem cell; HSC; multipotent progenitor; MPP; common lymphoid progenitor; CLP; common myeloid progenitor; CMP; bone marrow stem cell; mouse; murine; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                     This invention relates to a novel method for predicting gene potential by associating nucleic acid sequences of unknown function with particular sub-population profiles. Specifically, it refers to classifying an unknown multi-lineage affiliated gene by collecting hybridisation data to develop a gene expression map, in order to determine the discrete sub-population where it is expressed. The present invention describes methods for predicting the lineage commitment of genes associated with the self-renewing haematopoietic (blood) stem cells (HSCs), as well as the nonself renewing multipotent progenitors (MPPB), common lymphoid progenitors (CLPB) and common myeloid progenitors (MPPB), which are collectively referred to as bone marrow stem cells populations. As such, these methods can be used to identify associated multi-lineage affiliated genes and the procession of the progenitors of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Classifying an unknown expressed nucleic acid

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

# Sequence 806, Application US/09540236

# Patent No. 6673910

# GENERAL INFORMATION:

# APPLICANT: Gary L. Breton et al.

# TITLE OF INVENTION: NUCLEIC ACID AMINO ACID SEQUENCES RELITITE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

# TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

# TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

# TITLE OF INVENTION: NUMBER: US/09/540,236

# CURRENT APPLICATION NUMBER: US/09/540,236

## CURRENT APPLICATION NUMBER: US/09/540,236

## CURRENT FILING DATE: 2000-04-04

## NUMBER OF SEQ ID NOS: 3840

## SEQ ID NO 806

## LENGTH: 1053

## TYPE: DNA

## ORGANISM: M.catarrhalis
